

The Norwegian and the Spanish Young Members Group invite to a foundation workshop in Madrid 22-23th of April 2017.

## Young Members Group (YMG)

The Norwegian YMG is a committee in Norwegian Concrete Association (NCA), founded in 2012 and focus on:

- Creating a network for young people (under 35 years) in the concrete industry, by arranging social events with concrete related lectures/presentations.
- "Recruit" students to study concrete related subjects and show the opportunities for work in the concrete industry.
- Make young people participate in committees and working groups in the NCA.

The Spanish YMG in The International Federation for Structural Concrete (fib), contacted the Norwegian YMG in august 2016, in order to start an **international YMG** for concrete associations worldwide.

We are trying to reach out to other young people in other countries, to participate in the creation of this international network. There will be a **workshop**, with election of international board members in **Madrid, 22-23 of April 2017**.

We like to invite young people in the concrete industry worldwide to participate in this event. Age 35 or younger.

Do you know people that could be interested in this? Send an email to Andreas or Abraham:

Organized by 

### fib International Young Members Meeting

1-2 October, 2016  
Madrid, Spain

There is no doubt that structural concrete plays a relevant role in construction industry. As cities' storyteller, it has been nurtured of improvements and innovations that allowed its use in buildings and structures over the years. Nowadays, structural concrete must follow its way by establishing alliances with other materials to improve its strength and aesthetics, as well as to fulfill new design criteria and requirements.

From the **fib**, we are encouraged to achieve this goal. We want to boost networking between young professionals of structural concrete, and create the "**fib Young Members Group**" as a dynamic and international internal branch, which holds the responsibility to bring structural concrete to the future through solid technical knowledge and creativity.

Join us and be part of it!
